ASSET ALLOCATIONS

Astor's flagship strategy takes a macroeconomics-based approach to asset allocation using the proprietary Beacon Economic Index®.

- Pursues the ability to offer risk mitigation by strategically reducing risk as the economy weakens in order to minimize portfolio exposure to potentially wealth-destroying events.
- Seeks total return through a combination of capital appreciation and income.
- Attempts to produce more favorable risk adjusted returns (higher average return and lower volatility) than broad equity and alternative benchmarks by increasing allocations to risk assets during times of economic strength and replacing risk assets with defensive positions such as fixed income during periods of economic weakness.

PORTFOLIO HOLDINGS

*Net expense fees above reflect that the Adviser has contractually agreed to waive its management fees and to make payments to limit Fund expenses, until November 30, 2026 so that the total annual operating expenses, including (i) any front-end or contingent deferred loads; (ii) brokerage fees and commissions; (iii) acquired fund fees and expenses; (iv) fees and expenses associated with investments in other collective investment vehicles or derivative instruments (including for example options and swap fees and expenses); (v) borrowing costs (such as interest and dividend expense on securities sold short); (vi) taxes; and (vii) extraordinary expenses, such as litigation expenses (which may include indemnification of Fund officers and Trustees, contractual indemnification of Fund service providers (other than the Adviser) of the Fund do not exceed 1.40%, 2.15% and 1.15% for Class A, Class C and Class I shares, respectively.

Fund Holdings Information: The presented holdings are calculated as a percentage of total assets. The top holdings, industry sectors, and asset allocation are presented to illustrate examples of the securities the Fund has bought and the diversity of areas in which the Funds may invest, and may not be representative of the Fund's current or future investments. Position weights and asset class percentages may not sum to 100% due to rounding.

Benchmark Information: The benchmark is the S&P 500 Index. Presented returns assume the reinvestment of dividends. The S&P 500 Index is an unmanaged composite of 500 large capitalization companies. S&P 500 is a registered trademark of McGraw-Hill, Inc. **60% S&P 500/40% Bloomberg U.S. Aggregate Bond Index:** A custom benchmark consisting of the summed returns of 60% of the S&P 500 Total Return Index and 40% of the Bloomberg U.S. Aggregate Bond Index on a monthly basis. Index returns are calculated with dividends reinvested. This custom benchmark is often used for comparison purposes as it represents a "balanced" portfolio of equities and fixed income.

The Beacon Economic Index® is a proprietary index that represents an aggregation of various economic data points, including output and employment indicators. The Beacon Economic Index® is designed to track the varying levels of growth within the U.S. economy by analyzing current trends against historical data. The Beacon Economic Index® is not an investable product. When investing, there are multiple factors to consider. The Beacon Economic Index® should not be used as the sole determining factor for your investment decisions. The Index is based on retroactive data points and may be subject to hindsight bias. There is no guarantee the Index will produce the same results in the future. The Beacon Economic Index® is a tool created and used by Beacon. All conclusions are those of Beacon and are subject to change.

Important Risk Information

Mutual funds involve risk including the possible loss of principal. The Fund seeks to achieve its objectives by investing in Exchange-Traded Funds ("ETFs"). An ETF is a type of Investment Company which attempts to achieve a return similar to a set benchmark or index. The value of an ETF is dependent on the value of the underlying assets held. ETFs are subject to investment advisory and other expenses which results in a layering of fees for clients. As a result, your cost of investing in the fund will be higher than the cost of investing directly in ETFs and may be higher than other mutual funds with similar investment objectives. ETFs may trade for less than their net asset value. Although ETFs are exchanged traded, a lack of demand can prevent daily pricing and liquidity from being available.

The Fund can purchase ETFs with exposure to equities, fixed income, commodities, currencies, developed/emerging international markets, real estate, and specific sectors. The underlying investments of these ETFs will have different risks. Equity prices can fluctuate for a variety of reasons including market sentiment and economic conditions. The prices of small and mid-cap companies tend to be more volatile than those of larger, more established companies. It is important to note that bond prices move inversely with interest rates and fixed income ETFs can experience negative performance in a period of rising interest rates. High yield bonds are subject to higher risk of principal loss due to an increased chance of default. Commodity ETFs generally gain exposure through the use of futures which can have a substantial risk of loss due to leverage. Currencies can fluctuate with changing monetary policies, economic conditions, and other factors. International markets have risks due to currency valuations and political or economic events. Emerging markets typically have more risk than developed markets. Real estate investments can experience losses due to lower property prices, changes in interest rates, economic conditions, and other factors. Investments in specific sectors can experience greater levels of volatility than broad-based investments due to their more narrow focus.

The Fund can also purchase unleveraged, inverse fixed income and equity ETFs. Inverse ETFs attempt to profit from the decline of an asset or asset class by seeking to track the opposite performance of the underlying benchmark or index. Inverse products attempt to achieve their stated objectives on a daily basis and can face additional risks due to this fact. The effect of compounding over a long period can cause a large dispersion between the ETF and the underlying benchmark or index. Inverse ETFs may lose money even when the benchmark or index performs as desired. Inverse ETFs have potential for significant loss and may not be suitable for all investors.

An investor should consider the Astor funds' investment objectives, risks, charges, and expenses carefully before investing. This and other information about the Astor funds are contained in the funds' prospectus, which can be obtained by calling 877.738.0333. Please read the prospectus carefully before investing. The funds are distributed by Northern Lights Distributors, LLC a FINRA/SIPC member. Astor Investment Management is not affiliated with Northern Lights Distributors, LLC.
